Project:

ADRIAN (SK)

Supported by:

PEDAL

Support measure:

Business Support

DESCRIPTION OF PROJECT

ADRIAN GROUP innovates and develops energy-efficient heating/cooling systems with respect to the environment. Huge electricity savings have a direct impact on environment. Every evaporation unit that the customer prefers over standard air conditioning is a win for both the user and nature.

DESCRIPTION OF SERVICE

The aim of the W4RES support services is to enable the company to enter new markets through international tenders, as well as to build capacity for successful participation in tenders.

Project:

BUDA (SK)

Supported by:

PEDAL

Support measure:

Business Support

DESCRIPTION OF PROJECT

BUDA is a small ECOcommunity founded by four women. The goal of the BUDA project is to build a showcase sustainable building that will be used for RHC awareness and education. It involves reconstructing a neglected ice-cream shop into a modern building, using principles of sustainability and RHC solutions. The centre will be dedicated to community, sustainable development, environmental education, advocacy for social and cultural change, and the climate crisis and its negative impacts.

DESCRIPTION OF SERVICE

The support provided through the W4RES project includes 1) involving the centre in international projects to raise awareness of RHC solutions, 2) building a community of people interested in sustainable ways of renovating buildings, and 3) gaining access to innovating training, materials, and international experts.

Project:

Energia Real (SK)

Supported by:

PEDAL

Support measure:

Business Support

DESCRIPTION OF PROJECT

ENERGIA REAL s.r.o. has been developing and producing equipment for thermal energy recuperation from waste water and waste air ventilation of buildings. It is an effective and easily viable solution and therefore can be applied in every building with running water or air ventilation system. The technology can deliver 100% of the heat energy required for warm water production and for heating systems (up to -10° Celsius of external weather temperature).

DESCRIPTION OF SERVICE

Business support provided by PEDAL through W4RES is specifically focused on raising awareness and increasing awareness of international funding opportunities. It also includes building capacities in the field of proposal writing, helping ENERGIA REAL access international funding.

Project:

KaFsimo (GR)

Supported by:

PEDAL

Support measure:

Business Support

DESCRIPTION OF PROJECT

KaFsimo is a women-led, community-based project that aims to change behaviour for the reduction of our carbon footprint, fight climate change and promote inclusion through coffee recycling! Its specific objectives are (1) to facilitate a mentality change through praxis, and (2) to test and prove a low-emissions logistics system for organic waste management. KaFsimo collects used coffee grounds from cafes and converts them into bioenergy, and is the first waste management system to make use of e-mobility.

DESCRIPTION OF SERVICE

The aim of the business support provided by PEDAL is to further develop competencies related to proposal writing for successful participation in international funding opportunities.
