Support

DESCRIPTION OF PROJECT

High5Girls is an organization focused on attracting girls between the ages of 13-19, into the fields of science, technology, engineering and math (STEM). Using their own designed learning experiences, based on solid pedagogical theories and supported by 100 successful female role models, High5Girls is trying to close the gender gap in the Digital Sector and empower young women to create, innovate, tinker and turn their ideas into reality.

DESCRIPTION OF SERVICE

Through W4RES they are receiving access to funding support, identifying programs/projects which are specifically about women in STEM and understanding in detail the application process.

Project: EcoMidas (PL) – From Waste to Heat

Supported by:
ECWT

Support
measure:
Business
Support

DESCRIPTION OF PROJECT

The main purpose of the Eco-midas project is to create a pilot local energy community in the Gdansk ul. Ojcowska neighbourhood to transform the economy to create 0 waste approach. The project is intensively working on creating a marketplace for all stakeholders interested in green transformation and at the same time working on building up incomes from services of the biowaste collection from the public and private green areas.

The project's goal is to pilot a biomass system which ensures the production of around 5 to 10 tons weekly and 250 – 500 tons yearly.

DESCRIPTION OF SERVICE

Through W4RES EcoMidas is (i)connected to the leading hydrothermal carbonization of biomass plant in Europe; (ii) gaining knowledge about sustainable processing of bio-mass and (iii)learning about access to funding for biomass focused projects and especially development of new bio-based products.

Project:
IRES (PL) -
Integrated RES
solution for
heating refugee
communities

Supported by:
ECWT

**Support
measure:**
Business
Support

DESCRIPTION OF PROJECT

The presented concept of IRES –vertical turbin application for heating and cooling is the idea of the Ukrainian lawyer, social innovator and award winning Grain Brain Ltd. start-up founder Khrystyna Potapenko and supporting specialists and practitioners, who propose to develop and adopt the prototype solution for the purpose of the heating and cooling of the refugee community of the 50+ person in Dobczyce Poland and similar communities in Malopolska Region. Proposed solution is innovative, scalable, efficient and flexible.

DESCRIPTION OF SERVICE

Through W4RES partner ECWT ´s network (i) Grain Brain founder is conceptualizing the prototype of the device in order to successfully scale it´s size to the needs of the refugee community; (ii) ECWT is providing training in connection with planned crowdfunding campaign; (iii) W4RES will contribute to dissemination of the new innovative solution..
